sudo apt-get -y install libtool sudo ln -s /usr/bin/libtool /usr/bin/pkg-config Set the environment: export CC="gcc-5" export CXX="g++-5" export CPP="g++-5" export CFLAGS="-g -Wall" export CXXFLAGS="-g -Wall" export LDFLAGS="-lpthread" export PKG_CONFIG="pkg-config" Compile the program with make It should create a.deb package which you can install by sudo dpkg -i I have done a linux-related project recently that I can provide a.tar.gz package if this proves to be useful to you. In modern data storage systems, storage systems are often integrated within a data storage architecture. For example, storage systems may be integrated within a data storage network that provides data services to clients over a network, such as the Internet. Other storage systems may be directly attached to individual computers and provide the storage services to the individual computers. In some cases, storage systems may be distributed over several locations, and these locations may be geographically distributed. While modern data storage systems generally allow storage systems to be integrated within a data storage architecture, the integration of storage systems into data storage architectures is not without challenges. One such challenge includes the storage of data and metadata that is required to define the storage system in the data storage architecture. In many cases, this data and metadata are stored in a network location that is accessible to a user. However, while the storage of the data and metadata may be managed by the user, the data and metadata cannot generally be altered. For

example, if a user wishes to modify the storage system, the user must often delete the original data and metadata, copy the modified data and metadata, and upload the modified data and metadata to the network location that is accessible to the user. Because these operations can take a significant amount of time, and especially if the storage system includes a large amount of data and/or metadata, these operations can significantly impact the performance of the storage system, in addition to impacting the performance of other systems that are included within the data storage architecture.
